

## ACS - Animal Control System

This system is designed for animal control agencies for the purpose of capturing and tracking information on animals over which the agency has jurisdiction. Designed in a modular manner, the system provides easy to use menus from which to select functions. The modules comprising the system are:

**RECEIVING.** An animal number is recorded, such as type, breed, neutering information, rabies tag #, up, owner information, and cage

assigned and identifying information is markings, name, name of veterinarian, whether the animal was brought in or picked assigned to.

**SHOTS/TREATMENT.** This module records the shots or other treatment given the animal along with a follow-up date.

**MEDICINE.** This module records the type, amount, frequency, start & stop dates, follow-up date and staff ID of medication prescribed.

**ANIMAL CHECKS.** A code table for Work Type is provided so that this module can record such items as when the animal was fed or checked for other reasons.

**RELEASE.** This module tracks an animal's release from the facility. Included are date and time of release, to whom released, reason for release, relationship to animal, and person releasing the animal. This module can be used for adoption purposes.

**COMPLAINTS.** This module records complaints from businesses or individuals which could result in an animal pickup and provides the agency with the means to enter a call type and dispatch information.

**CITATIONS.** Citations which are issued to animal owners are recorded and tracked in this module.

**COLLECTIONS.** Payments for citation related fees are recorded.

**CAGE INVENTORY.** Cage type, capacities and current populations are recorded.

**SUPPLY INVENTORY.** The agency may keep inventory records by inputting the type, quantity and reorder point for supplies.

**SUPPLY TRANSACTIONS.** Supply purchases or usage are recorded and interact with the Inventory module to add to or reduce quantity on hand.

**CODE TABLES.** Code tables used in the preceding modules are defined and maintained.
